

Introduction to Water Diplomacy

e-Learning course – 9 November – 6 December 2015

Background

Water is every living organism's common denominator. Societies depend on it for their own subsistence and growth, and go great lengths to ensure water secure futures. But freshwater is not, in essence and in practice, an egalitarian resource and its accessibility to some often means inaccessibility to others. With unprecedented population growth, new emerging economies and the effects of climate change, pressures on our finite freshwater resources are increasing. Meanwhile, the ability of some nations to secure their aqueous requirements is being severely challenged, causing great and legitimate concern that tensions around water hotspots will intensify among water users. Yet, water holds an immense potential for cooperation which has still to be understood and empowered. Water is and will remain at the heart of international peace and security, the defense of human rights and the imperative for sustainable development paths. An increasingly strong and coordinated response is therefore expected from the international community in order to raise awareness, mitigate conflict, and build cooperation from the growing challenges posed by water between sovereign states.

Learning objectives

At the end of this course, participants should be able to:

- Describe major contemporary stressors influencing freshwater availability and their impact on achieving national security goals;
- Identify water's potential for conflict and identify some of the world's main water "hotspots";
- Recognize water's cooperation potential and the benefits to be drawn from collaborative transboundary

water management between state actors;

- Analyze how diplomatic methods based on dialogue may be used towards mutually-beneficial problem-to-solution processes;
- Define the importance and structure of transnational water management institutions in their role to consolidate and sustain the benefits of cooperation around water.

Target Audience

The course primarily targets diplomats accredited to the United Nations and government officials seeking to enhance their knowledge of contemporary water-related geopolitical issues. International civil servants, including non-governmental organization representatives and private sector professionals working in the multilateral field of water are also highly welcome. In addition, scholars and graduate-level students with a focus on international relations and a specialisation in water-related issues are also encouraged to join.

Methodology

This activity will be conducted entirely in English and will be delivered online using UNITAR's Virtual Learning Environment. This will allow participants to work following a self-paced routine, supported by multimedia lesson materials, required and optional readings, discussion forums, assessment quizzes, a transboundary basin management simulation and a wealth of other theoretical and practical tools and information.

Registration and Course Fee

The course participation fee is 600 USD. Participants from Least Developed Countries (LDCs) are eligible to apply for a fellowship. Please contact the Multilateral Diplomacy Programme for more details. Registration will be closed as soon as the course is full and your place will be secured once your payment has been confirmed.
