

1st-12th October 2006, Varna, Bulgaria

INWEB's coordinator will deliver two lectures at NATO's ASI on "Overexploitation and Contamination of Shared Groundwater Resources: Management, (Bio)Technological, and Political Approaches to Avoid Conflicts". Using a combination of lectures and case studies, this ASI will acquaint participants with an integrated approach for the monitoring and management of shared groundwater resources, and provide tools for stakeholders to reach decisions on groundwater use that are both economically and socially sustainable.
