

21st-27th May 2006, Thessaloniki, Greece.

A course on image processing applied to remote sensing is to be held within the cooperative programme in Higher and Vocational Education and Training between the EU and the USA. The course will address problems generated by the quantity of observation data, explain the many faces of image processing and provide hands on practice with remote sensing software data processing. There will also be a field visit to the Nestos watershed. Lecturers include INWEB coordinator Prof. J. Ganoulis
